

UI/UX Design Specification

Project: CP Extension | Inspired by LeetCode & HackerRank Aesthetics

This document outlines the design language, color palette, typography, and component styles for the **CP Extension**. The aesthetic draws inspiration from top competitive programming platforms (LeetCode and HackerRank) to create a familiar, developer-focused, and highly readable interface tailored specifically for a browser extension format.

1. Design Philosophy

The extension must feel native to a developer's workflow. Key principles include:

- **High Contrast & Clarity:** Data density is high, so information must be separated using clear typographic hierarchies and subtle bounding boxes, not heavy lines.
- **Familiar Mental Models:** Utilize established colors for success (green), warnings/medium difficulty (orange), and errors/hard difficulty (red).
- **Compact Architecture:** Since this is a browser extension, padding and margins are tight (4px, 8px, 12px scale) to maximize the limited viewport (typically 400x600px).

2. Color Palette

The palette blends the warm, engaging accents of LeetCode with the sharp, crisp utility of HackerRank.

Brand Orange
#FFA116

Success Green
#00EA64

Surface Dark
#282828

Codeforces Blue
#3B5998

Surface Light
#FFFFFF

Background Base
#F2F3F4

Text Secondary
#8C8C8C

Hard / Danger
#EF4743

3. Typography

Typography relies on system fonts to ensure fast loading times and a native OS feel, supplemented by monospaced fonts for numerical data and ratings.

- **Primary Font (UI):** Inter, SF Pro Display, Segoe UI, sans-serif. Used for all general UI elements, buttons, and descriptions.
- **Monospace Font (Data):** JetBrains Mono, Fira Code, Consolas. Used for Contest Timings (e.g., `14:30:00`), Ratings (e.g., `1450`), and Ranks.
- **Scale Requirements:**
 - H1 (Extension Header): 16pt, Semi-Bold
 - H2 (Section Titles): 13pt, Medium
 - Body Text: 11pt, Regular
 - Micro-copy / Tags: 9pt, Medium

4. Component Style Guide

Cards & Containers

Platform Status Card

Containers use a white background (#FFFFFF) with a 6px border-radius and a subtle 1px solid border (#E0E0E0). Avoid heavy drop shadows to maintain a flat, clean aesthetic.

Tags & Badges (Topics / Difficulty)

Dynamic Programming

Graphs

Easy

Medium

Hard

Pill-shaped badges (border-radius: 12px) are used for topics. Difficulty ratings use tinted backgrounds of their respective semantic colors.

Progress Indicators (Upsolving Left)

Upsolving Progress: 65% Completed

Horizontal progress bars with a soft gray track and a vibrant green (#00EA64) indicator to show how many problems from the previous contest have been upsolved.

5. Layout & Spacing

To fit comfortably within a Chrome Extension popup (typically constrained to a maximum of 800x600, but optimally 400x500):

- **Padding:** Base padding unit is 8px. Use 16px for outer extension margins, and 8px/12px between internal card elements.
- **Alignment:** Follow a strict left-aligned grid for text to improve readability. Ratings (the requested "side mai rating likhna") should be right-aligned opposite the platform name.
- **Interactivity:** Hover states on contest rows should subtly darken the background (e.g., #F9F9F9) and change the cursor to a pointer to indicate clickability for jumping directly to the contest page.
